

POD Server®

PRINTING ON DEMAND

The **SOFHA POD Server** provides production environments with a world-class print on demand system. Designed to meet the high-speed challenges of on-demand printing including the ongoing convergence with data center printing, the SOFHA POD Server offers a complete end-to-end workflow printing solution.

SOFHA POD Server delivers an advanced in-RIP workflow capability supporting print engines at rated speed. The simple and efficient operation combined with highest productivity results in generous cost savings.

SOFHA POD Server – We can do it!

DocXPLOER with Customized Queues

On demand workflow control

DocXPLOER client tool provides click control over job and queue management, load balancing, job splitting, document archive manipulation and printing, imposition, forms and accounting. Browser-based monitoring & control with ProfiWEB for job & device management and web printing.

Imposition

Compensate for page creep, align front and back pages when printing booklets and brochures. Cut mark printing supports final document sizing. Uses simple one-button operation for finishing adjustments.

Direct Printing

Eliminate printing steps by dragging and dropping PostScript 3, PDF, PCL, TIFF or ASCII jobs.

Layout feature in printer driver plugin

Scanning

Document scanning capability with Profiscan providing scanning, scan to email, scan to FTP, scan to PDF and TWAIN compliant user application.
